

# Replacement Atomizing Heads

## Air/Water Humidification Systems

### PRODUCT DATA SHEET

*Replacement Atomizing Heads are available in brass or stainless steel construction.*

#### Introduction:

Replacement Air/Water Atomizing Heads utilize air and water under pressure to atomize the water into tiny droplets. These droplets are sprayed either directly into open space or released into a ducted airstream where they rapidly evaporate to a gaseous state and raise the level of relative humidity.

HERRMIDIFIER's Air/Water Atomizing Heads are designed and manufactured for dependable, extended operation. All brass or stainless steel construction eliminates rust and minimizes corrosion. Annual maintenance is typically sufficient to maintain performance. Atomizing heads are available in capacities of 6, 8, 10, 12, or 15 pounds of water per hour and consume only 0.12 CFM of air per pound of water capacity. An entire 100 lbs/hr system only consumes 12 SCFM!

The stainless steel cleaning needle ensures that the water orifice will remain clear of debris or mineral build-up. A spring-loaded silicone seat ensures positive shut-off of the supply water preventing dripping when the heads are not in operation. The heads are operated in an on/off fashion when part of a Dual Pneumatic System (open space) or may be fully modulated when used as part of a Herrmidicool System (ducted).

#### Applications Include:

- Cold Storage Rooms
- Food Processing & Storage
- Leather Storage
- Textile Plants
- Woodworking Plants
- Printing Operations
- Ducted Air Distribution
- Air Handling Units
- Hospitals & Medical Clinics
- Telecommunications
- Commercial Office Buildings
- Computer Rooms

#### Features & Benefits:

- Clean-out Needle Equipped Nozzles
- Fully Automatic Operation
- Non-dripping Atomizing Heads
- Low Air Consumption
- Over Four Decades of Proven Performance
- Systems Available for Raw or DI/RO Water
- Ideal for Dirty Atmospheres
- Brass or Stainless Steel Construction
- 1-year warranty
