

Control Sections

The control sections provide the following features:

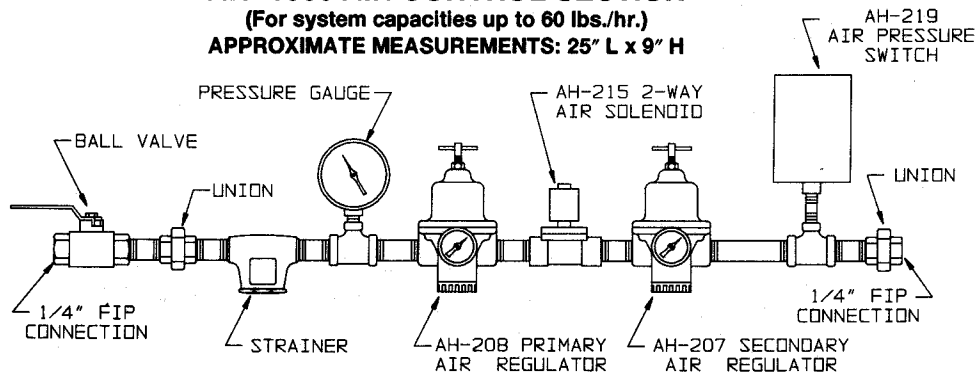

- Regulates plant air and water to desired operating pressures.
- Monitors the flow of air and water to the heads via solenoid valves.
- Air pressure switch prevents flow of water to heads until sufficient air pressure for atomization.
- Dripless operation & automatic purging of minerals from heads during system cycling.

The standard air control sections are available in three different sizes and the water control sections are available in two different sizes (see below):

AH -1000 AIR CONTROL SECTION

(For system capacities up to 60 lbs./hr.)

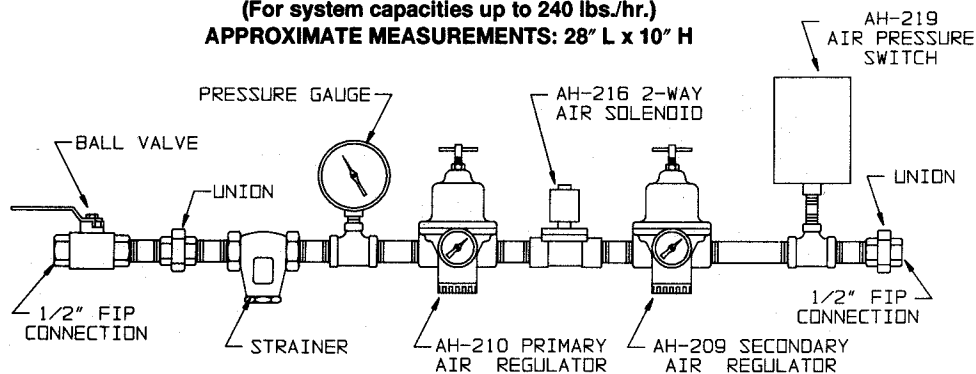

APPROXIMATE MEASUREMENTS: 25" L x 9" H

AH -1020 AIR CONTROL SECTION

(For system capacities up to 240 lbs./hr.)

APPROXIMATE MEASUREMENTS: 28" L x 10" H

AH -1050 AIR CONTROL SECTION

(For system capacities up to 500 lbs./hr.)

APPROXIMATE MEASUREMENTS: 32" L x 10" H
